Torsion Group Corp. Featured in Supply Chain World Magazine

June 17, 2019 - Torsion Group Corp. was recently featured in the summer issue of [Supply Chain World magazine](#). The article shares how Torsion Group is expanding its manufacturing and distribution capabilities through its family of companies: Torsion Source, a full-service engineering, manufacturing and supply chain resource for the garage door industry, and Action Industries, a leading manufacturer and distributor of weather seal components and accessories.

Joe Sitzman, vice president of operations and COO of Torsion Group notes, "We are standardizing distribution operations using a new lean process. The purpose is to eliminate wasted motion and improve on-time delivery to 95 percent plus. We were about 60 percent last year with lead times that extended three to five days. Now we are shipping within one day for 95 percent of our orders."

Last year, Torsion Source introduced an EPDM rubber extrusion production line for weather seal applications, as well as a new thermoforming process for window frames, and plans to make further improvements to its manufacturing capabilities in the near future.
